

ALLOW WATERFOWL TO STAY WILD

Observe and appreciate them from a distance.

NUTRITION

Wildlife have specialized diets and can find the food they need naturally. Improper foods such as bread, popcorn and crackers damages their digestive system and can cause death.

POLLUTION

Unnaturally large numbers of waterfowl create unsanitary conditions by their feces.

OVERCROWDING

Hand-outs attract wildlife to an area: damage natural resources, create safety hazards and spread diseases.

LOSS OF FEAR OF HUMANS

Artificial feeding can change behavior of wild geese and ducks. They are more likely to approach too closely causing conflict between the animals and humans.
